## Company Profile – Maya Software Technologies

### Mission

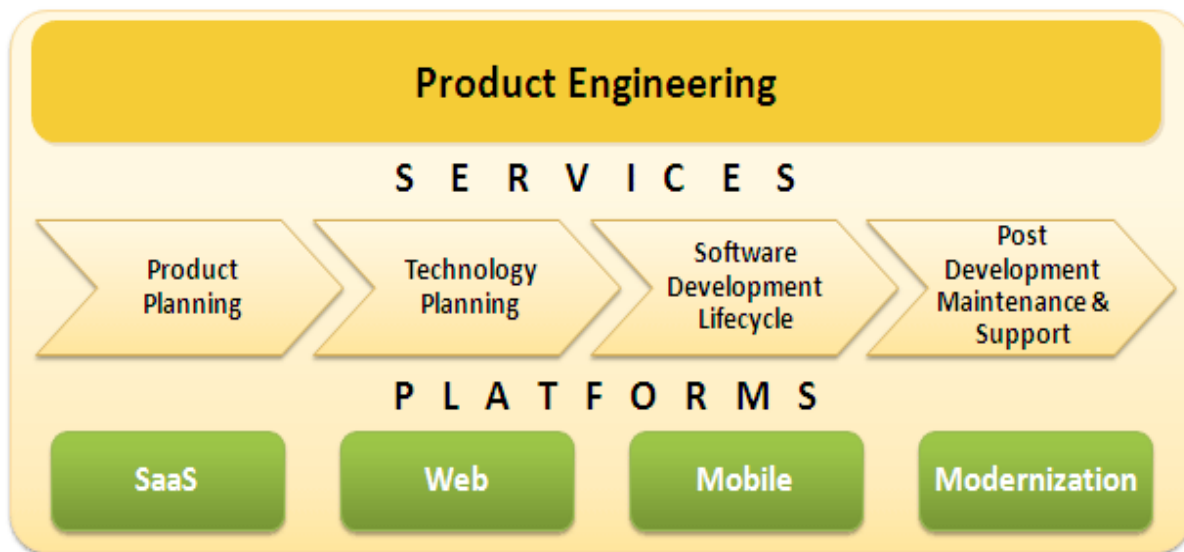

Our mission is to help our customers in "Overcoming Limits" of competitiveness, productivity, technology complexity, time and budget constraints.

### Corporate Profile

Maya Software Technologies is an early pioneer in IT outsourcing and the offshore software development business. For the past 23 years we have helped many customers balance their cost-performance parameters for IT projects via sustainable, long term relationships with Maya Software's. Our hybrid engagement model is designed to leverage the best of India and other countries so that our customers are the ultimate beneficiaries. Our track record speaks to our success; having developed many products of which are deployed in mission critical capacity in both large and small companies. We work with the same care and diligence to make each of our engagement a success, one at a time, small or large.

## Software Product Engineering Services

## Software Maintenance & Support

Maya helps software providers meet the challenge of ongoing offshore software maintenance and support with a range of services designed to substantially lower their maintenance costs and ensure timely response and guaranteed service levels.

With teams staffed and Software development center in India, Maya can serve as an extension of a client's support team, or provide turn-key, round-the-clock support services. Our staffing model, which includes a 'shadow team' able to supplement the core team as necessary, provides clients with greatly enhanced flexibility in addressing special software maintenance and support needs.

Our software maintenance and support services encompass such activities as:

- Error tracking and debugging
- Offshore Product Maintenance
- Version upgrades
- Version enhancements

- Technical troubleshooting
- Comprehensive user support
- Performance monitoring
- Performance testing
- Quality assurance testing
- Documentation development and maintenance

Maya's services include cost-effective maintenance and support for high-volume Web sites, including technical and user support, and ongoing content updates.

Maya carefully outlines service level requirements, customizing our maintenance process for unique client needs. We bring to each project a strong methodology for application maintenance, based on the Rational Unified process and our own proprietary Quality Management System.
