How it works?

1 Download

Just scan the QR code by scanning it with QR code scanner application in your device or download the app from the Google Play Store directly and you are good to go.

2 Configure Printer

Configure the printer with help of the instructions provided on our website. SkyPOS SHOP works well with almost all the branded thermal printers.

3 Get Going

That's it. You are ready to go. Printing bills from SkyPOS SHOP is as simple as operating a simple touch screen device. Even un-experienced and new users love to operate it.

SkyPOS REST

Making Restaurant Management Easier

SkyPOS REST makes the restaurant management work load a left hand job. It increases the efficiency of each person at least by three times. Captains can take the order directly on their tablets. Once the captain punches the order on to his tablet, the order is automatically printed on various kitchen printers and similarly reflected on the screens of other members of the team. Similarly when Captain generates the bill, cashier's screen automatically refreshed with the new generated bill. SkyPOS REST is the most efficient of the Restaurant Management apps available on the planet.
